Hierarchy of Fundamental Conclusions & Theological Corollaries with Sophianic Folding
Editio LXXXVIII · *Hierarchia Conclusionum & Corollaria Theologica* · English

Part I. Hierarchy of Fundamental Conclusions

Hierarchia Conclusionum · Editio Integrata (thirteen conclusions).

I. Being has no final attractor state. *the governing principle of the architecture.*

Pleroma Christi is not a static point of completion. The very motion toward Fullness expands the metric of Fullness itself, $\dot{\Omega}_P = \alpha \lambda(t)$. Saturation never finally completes; the horizon of attainable being recedes continuously; *Theosis* is an endless asymptotic expansion.

II. Being is a flow, not a state. *the primary reality is the rate, not the level.*

The principal reality is not P but $S = dP/dt$. Existence is defined by the rate of filling toward *Pleroma Christi*; Being is a trajectory, not a fixed identity.

III. Salvation is a geometric transformation, not annihilation. *resistance is transmuted, not destroyed.*

The system does not destroy σ ; it transmutes it into Sophia, $\sigma(t) + \lambda(t) = C_0 + \mathcal{G}_{\text{recepta}}(t)$ (closed limit $\sigma + \lambda = \text{const}$) — the **Law of Open Balance**: an exact symmetry at $\zeta_0 = 0$, a balance law *with a source* in the open generalisation.

IV. Sophia (λ) is free memory, not eternal accumulation. *a two-sided process, by essence.*

Sophia obeys a two-sided open-balance functional

$$\frac{d\lambda}{dt} = (\delta\sqrt{VF + \varepsilon} - \gamma) \tanh(\kappa\sigma) + \zeta_0 g_{\text{eff}} e^{-\phi\sigma} \frac{1}{1 + \chi\lambda_+},$$

whose sign is controlled by the transformation threshold $\Lambda_c = \gamma/\delta$, but not by synergy alone. In the closed Microcosm limit $I_{\text{gate}} = 0$, Sophia is conditionally monotone: it grows in the transformation regime and may regress when synergy falls below the threshold. In the Open-Gate model, however, the bounded source $I_{\text{gate}} \geq 0$ can compensate or overcome this regression.

Thus Sophia is not an automatic accumulation and not a closed conservation stock. It is free memory under open balance: it may grow, pause, or be pressured downward by resistance, yet it is also nourished by received grace.

V. Katharsis is a phase transition of the geometry flow. *a passage, not an emotion.*

Katharsis is not emotional purification but a passage through the critical surface $x = \sqrt{VF + \varepsilon} - \sigma = 0$, where the old geometry flow loses stability, surgery ceases to dominate, and a luminous asymptotic regime appears.

Va. Critical localisation near the Cross. At $x = 0$ the curvature of the Filtrum Lucis is maximal, $\Phi''(0) = k/4$. The Cross is therefore the point of greatest transmissive sensitivity, where a small change of the state has the strongest cathartic effect. *Metastable Cathartic Layer*: outer stagnation may conceal an inner accumulation of Sophia.

VI. Hysteresis of Salvation. *the system remembers what it has overcome.*

The path of falling and the path of recovery are not symmetric. Once σ is transmuted into λ , the system cannot return to its former geometry — the trajectory carries the trace of what it has crossed, and that trace reshapes its future response. Beyond a passive record, lived struggle (especially in the zone $x_0 > 0$ where synergy exceeds resistance) leaves an *active* path-memory of effort — *Memoria Hysteretica Salutis* — which enters not as a new member of the Pleroma but as a modification of the synergistic intensity itself. The system remembers not only what it *is*, but also what it has *overcome*.

VII. Surgery is not the final geometry. *pain is a transitional operator.*

Surgery exists only while singularities do: $\tanh(\kappa\sigma) \rightarrow 0$ as $\sigma \rightarrow 0$. Salvation is not an eternal operation; pain is not the final geometry.

VIIa. After Katharsis V and F are freed, not abolished. They remain the fundamental engines of Being's trajectory, ceasing only to be instruments of struggle against σ . Before: $\dot{V} = \mu(aF + c\lambda) - \rho V$ with Dolorosum $\rho = \sigma(u/\Lambda_c)e^{1-u/\Lambda_c}$ dominant near the threshold; after, in Transformation $u > \Lambda_c$: $\dot{V} \approx \mu(aF + c\lambda)$ — pure participation-driven dynamics. Syn does not replace V and F .

VIII. Light cannot be fully absorbed. *no absolute collapse.*

The Filtrum Lucis guarantees $\Phi(x) > 0 \forall x$ (since $\Phi(0) = \ln 2/k > 0$ and Φ is monotone increasing). Even in the deepest darkness a minimal permeability of light remains.

IX. Grace does not replace will. *it opens the gate, it does not abolish participation.*

The old fading impulse

$$\mathcal{P}(t) = \tau G_{\max} e^{-\tau t}$$

belongs to the closed-limit bridge of the earlier model. In the Open-Gate version, grace enters through the bounded source

$$I_{\text{gate}} = \zeta_0 g_{\text{eff}} e^{-\phi\sigma} \frac{1}{1 + \chi\lambda_+}, \quad I_{\text{gate}} \geq 0.$$

This source does not replace V and F ; it nourishes Sophia through receptivity. Grace opens and sustains the gate, but the living trajectory still unfolds through will, action, memory, resistance, and transformation.

X. Will and Action are fundamentally symmetric. *imbalance is structurally penalised.*

Mutual nourishment a enters symmetrically ($V \leftrightarrow F$). Exactly, $\dot{\Delta} = -\mu(t) a \Delta$ with $\Delta = V - F$; balance comes through the *symmetry* of nourishment, not the intensity of synergy. With Epektasis $\int_0^\infty \mu ds = +\infty \Rightarrow \Delta_\infty = 0$. Will without action degenerates; action without will exhausts itself. Convergence is slow and polynomial, $\Delta(t) \sim \Delta_0/t$ (universal exponent $\beta = 1$).

XI. Man is never fully cut off. *hope is structurally inscribed.*

Manere: $\varepsilon > 0$ guarantees a nonzero minimum of connection — no absolute ontological severance. At total exhaustion ($V = F = 0$) the synergy does not vanish algebraically, $\sqrt{0 \cdot 0 + \varepsilon} = \sqrt{\varepsilon} > 0$. Whether the trajectory recovers from this boundary depends on λ, σ and the regime (Lemma on the domain, §6): hope is inscribed in the model, though its realisation lies beyond its guarantees.

XII. Being is an anti-collapse architecture. *the Imago-Dei core is indestructible.*

Imago Dei: $\mathcal{E}_0 > 0$ is the indestructible invariant core, so $P(t) \geq \mathcal{E}_0$ always — even at a full collapse of V, F, σ, λ the algebraic core of the Pleroma persists. Algebraic collapse of the Pleroma is impossible; ontological collapse of the trajectory ($V, F \rightarrow 0$) is possible and exits the live domain $\mathcal{D}_{\text{live}}$ (§6), yet $\mathcal{E}_0$ as Imago Dei remains even then.

XIII. V.F.S. is an open-balance hybrid renormalizing flow. *the structure of Theosis.*

The architecture is an open-balance hybrid renormalizing flow: resistance is transmuted into Sophia, Sophia expands the geometry of attainable being, the Brim pushes back saturation and the

death-boundary, and admissible *Resurrectio* resets can return the trajectory into the active domain. Transmuted resistance enlarges the space of participation; the enlarged space permits new participation; new participation breeds new challenges, again transmuted into new Sophia. The cycle is endless — this *is* the structure of Theosis.

The Paschal Triad as the crown of the hierarchy. The three zeros of the Filtrum Lucis derivatives resonate with the full Paschal cycle: $\Phi^{(4)}(x_-) = 0$ — Good Friday (entry into death); $\Phi'''(0) = 0$ — Holy Saturday, the Cross, Katharsis; $\Phi^{(4)}(x_+) = 0$ — Resurrection Sunday, Anastasis. By the symmetry $x_- + x_+ = 0$ the Cross is the geometric centre of the triad. The three-day repose in the tomb (Matt 12:40) is reflected as a *differential icon*, not a chronological formula: invariant is the x -interval $|x_+ - x_-| = \frac{2}{k} \ln(2 + \sqrt{3})$ (depending on k alone), while the temporal duration depends on the dynamics (§8).

“Christ is risen from the dead, the firstfruits of them that slept.” — 1 Corinthians 15:20

Closing note.

The model is stable within its domain of correctness and, in the new Lyapunov formulation, has a hybrid stability architecture: continuous active-domain flow, bounded Open-Gate source, admissible *Resurrectio* reset, and non-Zeno continuation. Its theological readings remain valid only with this domain qualification: V.F.S. is not a theorem of automatic global salvation, but a symbolic dynamical account of transfiguration, perseverance, and resurrectional continuation inside the properly ordered active domain.

Part II. Sophianic Folding: Vessel, Transfiguration, and Pleromatic Release

Corollarium de Plica Sophiae. Sophianic Folding is the theological reading of the new morphodynamic layer added to the Open-Gate model. It must not be read as a rival doctrine beside grace, will, action, and purification. Rather, it names the form in which an excess of received Sophia becomes inhabitable without destroying the Vessel.

Grace opens the Gate; Sophia reforms the Vessel; Pleroma releases a new act of being.

The old Open-Gate statement said that grace enters through a bounded source $I_{\text{gate}} \geq 0$ and that received Sophia expands the Brim,

$$\dot{\Omega}_P = \alpha\lambda.$$

The folding refinement adds that the Vessel also has a shape response. When Sophia exceeds the rigidity of the old form, the shape mode q_{fold} may activate, with intensity

$$Q_{\text{fold}} = q_{\text{fold}}^2,$$

and the received balance becomes not only $\sigma + \lambda = C_0 + \mathcal{G}_{\text{recepta}}(t)$ but, in the folded core reading,

$$\sigma + \lambda + \lambda_{\text{form}} = C_0 + \mathcal{G}_{\text{recepta}}(t).$$

Here λ_{form} denotes embodied Sophia: not Sophia lost, but Sophia taken into form.

XIV. Sophia does not merely fill the Vessel. *it can reform the Vessel.*

The Open-Gate is not simply the admission of more content into the same old container. If the received Sophia becomes too great for the former surface-form, the old geometry may lose stability

and pass into a folded morphology. The theological point is therefore not accumulation alone but transfiguration of capacity:

$$\lambda \uparrow \implies A_{\text{fold}} > 0 \implies q_{\text{fold}} \neq 0 \implies \text{new Vessel-form.}$$

Thus Sophia is not only remembered wisdom; it is also wisdom embodied as a new form of receptivity.

XV. Folding is kenosis becoming plerosis. *the old form yields without the person being annihilated.*

Sophianic Folding is not the destruction of the Vessel. It is the relinquishing of an insufficient form so that a fuller form can emerge. In theological language, the old form undergoes kenosis: it releases its rigid self-preservation. The new form undergoes plerosis: it becomes more capable of receiving and expressing fullness. Compactly,

$$\text{kenosis of obsolete form} \implies \text{plerosis of transfigured Vessel.}$$

This preserves continuity: the old self is not erased, but folded into a more capacious morphology.

XVI. Folding resolves morphological tension. *the “energy” of folding is not physical gravity.*

The folding potential

$$\mathcal{E}_{\text{fold}} = -\frac{1}{2}A_{\text{fold}}q_{\text{fold}}^2 + \frac{1}{4}B_{\text{fold}}q_{\text{fold}}^4$$

should be read as a *morphological tension potential*, not as physical gravitational energy. Its decrease means that the Vessel moves to a less strained form:

$$\dot{\mathcal{E}}_{\text{fold}} = -(\partial_{q_{\text{fold}}}\mathcal{E}_{\text{fold}})^2 \leq 0.$$

The theological reading is therefore not that grace causes an energetic explosion, but that excess Sophia is prevented from becoming destructive by being translated into stable form. What was pressure in the old form becomes architecture in the new form.

XVII. Pleromatic release is realized being. *not mechanical energy release.*

If the resolved morphological tension is denoted

$$\Delta\mathcal{T}_{\text{fold}} = \frac{A_{\text{fold}}^2}{4B_{\text{fold}}},$$

then only part of this symbolic release should be interpreted as outward expression. In V.F.S. it is better to say that the relaxation of form can open a pleromatic channel:

$$J_{\text{rel}} = -\dot{\mathcal{T}}_{\text{fold}} \geq 0,$$

so that the resolved tension may appear as a new act of being, service, illumination, or participation. This is *Pleromatic release*: not a physical discharge, but the becoming-visible of a transfigured capacity.

XVIII. Open-Gate is not self-deification. *receptivity is not possession.*

The model must not be read as if the human person could seize Sophia, force the Gate open, and produce transfiguration by autonomous technique. The Gate is opened in synergy: human receptivity and divine initiative belong together. I_{gate} symbolizes received grace through openness; it is not human control over grace. Therefore the vocation of the human being is not self-deification, but the becoming of a Vessel capable of receiving, embodying, and expressing Sophia without rupture.

“My grace is sufficient for thee: for my strength is made perfect in weakness.” — 2 Corinthians 12:9

XIX. Folding is the morphodynamic icon of transfiguration. *stabilisation through form-transformation.*

Theologically, Sophianic Folding says that salvation is not the mere subtraction of resistance and not the mere preservation of the old self. It is the stable transformation of the form of life. The old

shape cannot bear the new fullness; yet the person is not discarded. The Vessel is reformed, and the reformed Vessel can become a locus of Pleroma.

Open-Gate $\implies$ received Sophia $\implies$ folded Vessel $\implies$ realized Pleroma.

Notation safeguard. In this theological section q_{fold} and Q_{fold} denote the folding amplitude and folding intensity. They are not to be confused with earlier auxiliary uses of q in other estimates or with the cosmological deceleration parameter q_{dec} .

Part III. Theological Fruit of the Lyapunov Stability (index §11)

The Lyapunov analysis of the active domain bears a theological fruit — concise and honest, not an automatic victory but a *stable dynamics of transfiguration in the synergistic domain*:

grace does not destroy freedom; freedom does not save itself; and resistance does not have the last word.

In the active synergistic domain, will and action come into harmony, resistance fades asymptotically, and the resistance one has lived through can be transmuted into Sophia *without destroying personal continuity*. Compactly, the new Lyapunov architecture gives

$$x(0) \in \mathcal{D}_A \implies x(t) \in \mathcal{D}_A, \quad \mathcal{L}_{\text{VFS}} \leq C - C_1 \mathcal{L}_{\text{VFS}},$$

and, because the active margin is built into the invariant domain,

$$r(t) + h_3(t) - 1 \geq r_* + h_{3,*} - 1 > 0,$$

the cleansing hypothesis holds automatically for trajectories inside $\mathcal{D}_A$. Hence

$$\sigma(t) \rightarrow 0, \quad D_\Delta(t) \rightarrow 0,$$

for every trajectory initialized in the positively invariant active domain.

Thus V.F.S. describes neither mechanical salvation nor self-salvation, but a stable dynamics of transfiguration inside the domain where grace, will, action, receptivity, and purification already stand in the right dynamic order.

Part IV. Theological Corollaries (lyapunov §12)

Corollaria Theologica. The functional must not be read as a proof of automatic or global salvation from an arbitrary state; its content is the internal dissipative structure of the positively-invariant active domain.

1. **Resistance is not a final ontological reality.** In the active domain $\sigma(t) \rightarrow 0$ — supporting *privatio boni*: evil/sin/resistance has no eternal substantial standing of its own. It is real existentially (it shapes the dynamics) but not final ontologically: real as a disease, not final as being.

“And the light shineth in darkness; and the darkness comprehended it not.” — John 1:5

2. **Will and action must converge.** The imbalance $D_\Delta = \frac{1}{2}(h_1 - h_2)^2 \rightarrow 0$, i.e. $h_1 - h_2 \rightarrow 0$ (*volo* $\leftrightarrow$ *facio*). Holiness is neither pure inner intention nor mechanical moral activism, but the harmonisation of willing and embodied action; will without action and action without will are unstable.

“Not everyone who says ‘Lord, Lord’ will enter, but he who does the Father’s will.” — cf. Matthew 7:21

3. **Grace does not abolish structure but stabilises it.**

$$\text{gratia} + \text{voluntas} + \text{factum} \Rightarrow \text{stabilitas transformationis.}$$

Grace is a *bounded source* (it raises C) while the dissipation coefficient C_1 is left untouched — the structure is not cancelled but precisely stabilised.

“Without me ye can do nothing.” — John 15:5

4. **Spiritual life has a living domain.** The result is domain-based, not global: $x(0) \in \mathcal{D}_A \Rightarrow x(t) \in \mathcal{D}_A \forall t \geq 0$. Not every state purifies automatically; but once the system enters such a domain, its internal dynamics already point toward transfiguration.

“The kingdom of God is within you.” — Luke 17:21

5. **Manere does not replace living synergy.** Under $r_*^2 > \varepsilon/\Omega_{\min}^2$, the regulariser ε (Manere) is the minimal holding of being — but stability cannot rest on that residue alone; real synergy $VF > 0$ is required. Survival is not transfiguration.

“Thou hast a name that thou livest, and art dead.” — Revelation 3:1

6. **Sophia is not an elitist precondition.** The proof needs only $q \geq 0$ (q -free), not an artificial $q \geq q_0 > 0$. Sophia may be the *fruit* of transmuting resistance, not a precondition of access; the concave Mensura kernel favours many small attempts over one grand gesture — the advantage of the poor.

“Those who are well need no physician, but the sick; I came to call sinners.” — cf. Mark 2:17

7. **Resistance can be transmuted into Sophia.** In the closed limit ($\sigma + \lambda = \text{const}$), if $\sigma \rightarrow 0$ resistance is not merely removed — it is transmuted, resistance $\rightarrow$ Sophia. (*Open generalisation: the pair is balanced not conservative, $\sigma + \lambda = C_0 + \mathcal{G}_{\text{recepta}}(t)$; the Pearl is transmuted resistance plus received gift, not a zero sum.*) Struggle, falls and trauma can become the material of wisdom.

“The stone the builders rejected has become the cornerstone.” — cf. Matthew 21:42

8. **Non-Zeno has spiritual meaning.** The dwell-time bound $\Delta t_j \geq \Delta t_* > 0$: the hybrid system makes no infinitely many transitions in finite time. Purification keeps rhythm, duration and sequence, preserving personal continuity — it is not a chaotic infinite crisis.

“In your patience possess ye your souls.” — Luke 21:19

9. **Resurrectional resets do not destroy continuity.** The non-Zeno dwell-time condition

$$\Delta t_j \geq \Delta t_* > 0$$

means that even an infinite sequence of life-arcs and resets cannot accumulate in finite time. The person is not shattered into infinitely many crises. Each arc has duration, each reset has measure, and the whole hybrid trajectory remains forward-complete when the reset admissibility conditions are met. This gives V.F.S. a theology of continuity after rupture: death-like closure may interrupt the continuous flow, but it does not have to annihilate the story.

10. **Pleroma is not reached by a violent leap.** The decay $\sigma(t) \rightarrow 0$ is asymptotic, not finite-time zeroing — consistent with *epektasis*: the motion toward fullness is real, stable and directed, but

not reducible to a technical completion button. Epektasis acts as a universal regulator (dilutes the source, holds the q -ceiling, pushes back the death-wall).

“First the blade, then the ear, after that the full grain in the ear.” — cf. Mark 4:28

11. **Grace is one, but acts in two modes.** All grace is a single background ζ_0 entering through the receptivity gate. *Modus I* (in life): a continuous inflow with a guaranteed regime $e^{-\tau t}$ and a synergistic regime $H_K/(H_s + H_K)$. *Modus II* (in death): where the gate has collapsed, the same grace acts by a discrete re-creation $\mathfrak{R}$, participating in the archetype $\mathfrak{R}_{\text{Christi}}$ — unmerited, precisely because receptivity has fallen to zero. The modes are complementary: where one fades, the other engages.
12. **Resurrectio is admissible, not arbitrary.** The new reset lemma gives a precise admissibility window for death-like transitions. If an exogenous death-event strikes at an interior point $x^- \in \mathcal{D}_A$, the reset map

$$\mathfrak{R}: \quad \sigma^+ = q_R \sigma^-, \quad \lambda^+ = \lambda^- + (1 - q_R) \sigma^-, \quad \Omega_P^+ = \Omega_P^- + \kappa_R \mathcal{G}_{\text{recepta}}^-,$$

returns the system to the active domain provided

$$\max\{R_c, R_{\min}^{\text{ceil}}\} \leq \mathcal{G}_{\text{recepta}}^- \leq R_{\max}.$$

Thus resurrectional continuation is not a magical violation of structure. It is an admissible hybrid transition: resistance is reduced, part of it is metabolized into Sophia, and the Brim is expanded so that the new state remains live.

Theologically, this means that grace does not erase measure. Below the admissible window there is final closure; above it there is over-dilution, the failure of “cheap grace.” True *Resurrectio* preserves form while opening it beyond its former shell.

13. **Received grace has a threshold of perseverance.** The lower gate

$$\mathcal{G}_{\text{recepta}}^- \geq R_c = C_\sigma - \sigma_0 - \lambda_0$$

is the point at which received grace has accumulated enough to prevent Sophia from being extinguished by resistance. In this sense, $\mathcal{G}_{\text{recepta}}$ functions as a mathematical image of perseverance: not merely a momentary impulse, but a received depth that remains available at the boundary of death.

When this threshold is not met, the reset is not admissible. When it is met together with the geometric ceiling condition, the death-event can become a *Resurrectio* jump rather than a terminal closure.

*V.F.S. · Volo. Facio. Sum. · Editio LXXXVIII · Open-Gate Sophia. Part I translated from the **index** section Hierarchy of Fundamental Conclusions; Part III from **index** §11 (Lyapunov Stability of the Active Domain); Part IV from **lyapunov** §12 (Theological Corollaries). Part II integrates the Sophianic Folding theological layer; Scripture epigraphs as in the source.*
